Postdoc/Junior Epidemiologist/Statistician/Research fellow (80-100%) in Paediatric Respiratory Medicine

The Institute of Social and Preventive Medicine (ISPM) at the University of Bern performs research in a range of disciplines relevant to public health (www.ispm.unibe.ch). Groups cut across divisions, facilitating an interdisciplinary approach to research in the fields of clinical epidemiology, social and behavioural health, biostatistics, and international and environmental health.

The Child and Adolescent Health Group, headed by Prof. Dr. med. Claudia Kuehni, conducts population-based and clinical studies in child health.

Would you like to improve knowledge and care in children with asthma? Would you like to implement evidence-based medical practice? In this position, you will part be of the Swiss Paediatric Airway Cohort (SPAC), which is a large clinical cohort of children seen in respiratory outpatient clinics in Switzerland, funded by the Swiss National Science Foundation. Asthma is the most common chronic disease in childhood. Yet, diagnosing asthma is challenging because it is a heterogenous disease highly variable over time without a gold standard diagnostic test. Asthma also has a highly variable course over time and the factors that predict outcomes remain poorly understood. We aim to improve foundational knowledge about asthma diagnosis and to develop prognostic models to predict short-term symptom trajectories and long-term disease persistence. We look for an experienced research fellow, who will co-lead a research group of 4-5 people on childhood asthma.

Main tasks:
- Manage the SPAC study including coordination of tasks, communication with collaborators, and implementation of standardization of asthma diagnosis in children’s hospitals in Switzerland.
- Analyse data from clinical and population-based cohort studies to develop and validate models to predict short and long term outcomes in children with asthma.
- Write publications in peer-reviewed journals and present results at national and international conferences.
- Support PhD students in manuscript preparation and statistical analyses.

Requirements:
- PhD in Paediatrics, Paediatric Pulmonology, epidemiology, statistics, or similar.
- At least 3 years’ experience in epidemiology or public health in a medical setting.
- Have a strong research track record.
- Statistical programming skills, with experience in Stata or R including generalized linear models, multi-level models and survival analysis. Experience in meta-analysis and latent variable modelling would be an asset.
- Organizational skills and ability to work efficiently in several parallel projects.
- Ability to work independently and interact with interdisciplinary teams.
- Excellent knowledge of English (German would be an asset).

The position is available immediately, with negotiable date of start and offered for 2 years initially. Salary depends on qualification and experience.

If you are looking for an exciting position in a highly motivated interdisciplinary team please send your CV with motivation letter to Professor Claudia Kuehni (claudia.kuehni@ispm.unibe.ch) and to Dr. Eva Pedersen (eva.pedersen@ispm.unibe.ch). For further information, please contact us by e-mail. Please send you application as soon as possible, at the latest by June 11th 2023.
